

INDUSTRIAL TOWER SINGLE WIDTH KIT LIST AVAILABLE IN THREE LENGTHS: 2m, 2.5m or 3m

This range of Single Width Industrial Towers gives an exceptional versatile system ideal for working in narrow or confined spaces such as stairwells, corridors, alleyways etc.

All frames can be used as uppers or lowers, simply place the platform on the third rung below the top of the tower and the correct guardrail height is achieved.

The number of trapdoor platforms in the Tower Kit List is sufficient to assemble and dismantle the tower by the 3T method.

The platform levels marked * indicate that these platforms and handrails are repositioned.
